

Informations

This zip file contains our 3 full python files if you need them. We synthetized Session 3 and Session 6 in PDFs for you to have more clarity while going through our code.

Every function has a docstring and is explained step by step for clarity and to make our code easily understandable.

We also leave you the link of our git depository from which we work and that contains every file we ever created for this course in case any of the files you received is corrupted.
